

EATING ON MARS & FEEDING CANBERRA

BROUGHT TO YOU BY THE CANBERRA REGION FOOD COLLABORATIVE ¹

FORMAT: COLLABORATION LAB FACILITATED BY THE CANBERRA INNOVATION NETWORK.

The ACT Government will soon finalise its inaugural Food Strategy. Expectations are running high that it heralds new energy in Canberra's food system. Consumer citizens want more say over the food they eat and to know it's sustainably produced. Everyone has the right to access sufficient nutritious and affordable food. But maintaining our food security will be fraught with growing disruption to our national supply-chain.

Our food system practitioners must bring the food strategy's objectives to life. It's timely then to consider the 'how' and the 'who' of improving our city's access to sustainable food.

Who are the players looking to sell more? What are the barriers? What are the solutions to take aspiration to practical outcomes?

Scene setters: Two strikingly different takes on producing more food:

The Gaia Project

Winner NASA Deep Space Food Challenge - Gaia Project Australia
